Admin Tools – users, security and reporting

Simulator

Studio for defining Message Validation and Message Creation Projects

Helping solve the transition from MT to MX

- Validation and file creation applications can be run on-premise as data transformation environment

- Lightweight solution for banks who want to process messages without data loss
  - Transforms inbound MX messages to MT, persists rich data
  - Transforms outbound MT messages to MX, and re-enriches
  - Easy to deploy on premise
  - Simple connectivity to bank systems via bank middleware

- Benefit: No change needed to payment systems or bank processes
