Loans or credit lines to enterprises

Question 1

Over the past three months, how have your bank's credit standards¹ as applied to the approval of loans or credit lines to enterprises^{2, 3, 4} changed? Please note that we are asking about the change in credit standards, rather than about their level.

⁴⁾ See Glossary for Enterprises.5) See Glossary for Enterprise size.

⁶⁾ See Glossary for Maturity.
7) "NA" (not applicable) does not include banks which do not have any business in or exposure to the respective lending category. Notes: The net percentage is defined as the difference between the sum of the percentages for "tightened considerably" and "tightened somewhat", and the sum of the percentages for "eased somewhat" and "eased considerably". The diffusion index is defined as the net percentage weighted according to the intensity of the response, giving lenders who have answered "considerably" a weight twice as high (score of 1) as lenders having answered "somewhat" (score of 0.5). The mean of the banks' responses is calculated using weights from 1 to 5 for the five possible response options. The number of banks responding refers to all participating banks which have business in or exposure to the respective lending category.

^{*} Figures might not add up to 100 due to rounding

Question 2Over the past three months, how have the following factors affected your bank's credit standards as applied to the approval of loans or credit lines to enterprises?

(in percentages, unless otherwise stated)

Competition from other banks

Competition from non-banks⁴

C) Perception of risk⁵

Competition from market financing

General economic situation and outlook

Industry or firm-specific situation and

outlook/borrower's creditworthiness⁶ Risk related to the collateral demanded

D) Your bank's risk tolerance⁵
Your bank's risk tolerance

¹⁾ The factors refer to the same sub-factors as in question 2. Detailed sub-factors were introduced in April 2022.

2) "NA" (not applicable) does not include banks which do not have any business in or exposure to the respective lending category.

Notes: The net percentage (NetP) is defined as the difference between the sum of banks responding "--" (contributed considerably to tightening) and "--" (contributed somewhat to tightening), and the sum of banks responding "+" (contributed somewhat to easing) and "++" (contributed considerably to easing). "o" means "contributed to keeping credit terms and conditions basically unchanged". The diffusion index (DI) is defined as the net percentage weighted according to the intensity of the response, giving lenders who have answered "considerably" a weight twice as high (score of 1) as lenders having answered "somewhat" (score of 0.5). The mean of the banks' responses is calculated using weights from 1 to 5 for the five possible response options.

Over the past three months (apart from normal seasonal fluctuations), has the share of formal and informal enterprise loan applications¹ that were completely rejected² by your bank increased, remained unchanged or decreased (loan volume, relative to the total volume of loan applications in that loan category)?

(in percentages, unless otherwise stated)						
			Share of reject	ted applications		
	Ove	erall		and medium-sized	Loans to large	enterprises
	Oct 23	Jan 24	Oct 23	Jan 24	Oct 23	Jan 24

See Glossary for Loan application
 See Glossary for Loan rejection.

²⁾ See Glossary for Loan rejection.
3) "NA" (not applicable) does not include banks which do not have any business in or exposure to the respective lending category.
Notes: Additional breakdowns were introduced in April 2022. The net percentage is defined as the difference between the sum of banks responding "increased considerably" and "increased somewhat", and the sum of banks responding "decreased somewhat" and "decreased considerably". The diffusion index is defined as the net percentage weighted according to the intensity of the response, giving lenders who have answered "considerably" a weight twice as high (score of 1) as lenders having answered "somewhat" (score of 0.5). The mean of the banks' responses is calculated using weights from 1 to 5 for the five possible response options. The number of banks responding refers to all participating banks which have business in or exposure to the respective lending category.

Over the past three months (apart from normal seasonal fluctuations), how has the demand for loans or credit lines² to enterprises changed at your bank? Please refer to the financing need of enterprises independent of whether this need will result in a loan or not.

^{1) &}quot;NA" (not applicable) does not include banks which do not have any business in or exposure to the respective lending category.

Notes: The net percentage is defined as the difference between the sum of the percentages for "increase considerably" and "increase somewhat", and the sum of the percentages for "decrease somewhat" and "decrease considerably". The diffusion index is defined as the net percentage weighted according to the intensity of the response, giving lenders who have answered "considerably" a weight twice as high (score of 1) as lenders having answered "somewhat" (score of 0.5). The mean of the banks' responses is calculated using weights from 1 to 5 for the five possible response options. The number of banks responding refers to all participating banks which have business in or exposure to the respective lending category.

Loans to households

Question 10

Over the past three months, how have your bank's credit standards¹ as applied to the approval of loans² to households³ changed? Please note that we are asking about the change in credit standards, rather than about

(in percentages, unless otherwise stated)

	Loans for hou	ıse purchase	Consumer credit	and other lending ⁴

¹⁾ See Glossary for Consumer confidence.

1) See Glossary for Consumer confidence.
2) See Glossary for Debt refinancing/restructuring and renegotiation.
3) See Glossary for Down payment.
4) "NA" (not applicable) does not include banks which do not have any business in or exposure to the respective lending category.
Notes: The net percentage (NetP) is defined as the difference between the sum of banks responding "++" (contributed considerably to higher demand) and "+" (contributed somewhat to higher demand), and the sum of banks responding "-" (contributed somewhat to lower demand) and "--" (contributed considerably to lower demand). "e" means "contributed to keeping demand basically unchanged". The diffusion index (DI) is defined as the net percentage weighted according to the intensity of the response, giving lenders who have answered "considerably" a weight twice as high (score of 1) as lenders having answered "somewhat" (score of 0.5). The mean of the banks' responses is calculated using weights from 1 to 5 for the five possible response options.

Over the past three months, how have the following factors affected the demand for consumer credit and other lending to households?

(in percentages, unless otherwise stated)												
							N	etP	ı	OI	Me	ean

Notes: The net percentage is defined as the difference between the sum of the percentages for "increase considerably" and "increase somewhat", and the sum of the percentages for "decrease somewhat" and "decrease considerably". The diffusion index is defined as the net percentage weighted according to the intensity of the response, giving lenders who have answered "considerably" a weight twice as high (score of 1) as lenders having answered "somewhat" (score of 0.5). The mean of the banks' responses is calculated using weights from 1 to 5 for the five possible response options. The number of banks responding refers to all participating banks which have business in or exposure to the respective lending category.

Annex 2 Results for ad hoc questions

Question 111

As a result of the situation in financial markets, has your market access changed when tapping your usual sources of wholesale and retail funding and/or has your ability to transfer risk changed over the past three months, or are you expecting this access/activity to change over the next three months?

(in percentages, unless otherwise stated)																		
			Ov	er the p	ast thr	ee mon	ths					Ov	er the r	ext thr	ee mor	nths

Retail funding is defined as funding via deposits held by non-financial corporations and households
 "NA" (not applicable) includes banks for which the source of funding is not relevant.

2) "NA" (not applicable) includes banks for which the source of funding is not relevant.
3) Usually involves on-balance sheet funding.
4) Usually involves the sale of loans from banks' balance sheets, i.e. off-balance sheet funding
5) Usually involves the use of credit derivatives, with the loans remaining on banks' balance sheets.

Notes: The net percentage (NetP) is defined as the difference between the sum of the percentages of banks responding "--" (deteriorated considerably/will deteriorate considerably) and "--" (deteriorated somewhat/will deteriorate somewhat), and the sum of banks responding "+" (eased somewhat/will ease somewhat) and "++" (eased considerably/will ease considerably). "" means "remained unchanged/will remain unchanged". The mean of the banks' responses is calculated using weights from 1 to 5 for the five possible response options. Std. dev. denotes standard deviation. Figures may not exactly add up due to rounding.

In connection with the new regulatory or supervisory actions ^(*), has your bank: increased/decreased total assets; increased/decreased risk-weighted assets; increased/decreased its capital position; experienced an easing/tightening of its funding conditions over the past twelve months; and/or does it intend to do so over the next twelve months?

(in percentages, unless otherwise stated)

Impact on your bank's funding conditions	0	5	89	2	2	3	2	3.0	0.40	157

^(*) Please consider regulatory or supervisory actions that have recently been approved/implemented or that are expected to be approved/implemented in the near future.

¹⁾ Total assets are the bank's total unweighted assets. Risk-weighted assets are the product of total assets and risk weights. Liquid assets should be defined as freely transferable assets that can be converted quickly into cash in private markets within a short time frame and without significant loss in value, in line with the European Commission Delegated Act of 10.10.2014 to supplement Regulation (EU) 575/2013 with regard to liquidity coverage requirement for Credit Institutions (C (2014) 7232 final). 2) "Capital issuance" refers to the change in the capital stock owing to capital issuance. If no capital has been issued in the period under review, the capital stock "remained"

^{2) &}quot;Capital issuance" refers to the change in the capital stock owing to capital issuance. If no capital has been issued in the period under review, the capital stock "remained basically unchanged" on account of "Capital issuance". Capital issuance includes the issuance of shares and hybrid instruments, as well as capital injections by, inter alia, national or supra-national public authorities.

³⁾ Please select "N/A" (not applicable) only if you do not have any business in or exposure to this category.

Notes: The net percentage (NetP) is defined as the difference between the sum of the percentages of banks responding "-" (decreased/will decrease considerably or experienced/will experience a considerable tightening of funding conditions) and "-" (decreased/will decrease somewhat or experienced/will experience a moderate tightening of funding conditions), and the sum of the percentages of banks responding "+" (increased/will increase somewhat or experienced/will experience a moderate easing of funding conditions) and "++" (increased/will increase considerably or experienced/will experience a considerable easing of funding conditions). "o" means remained unchanged/will remain unchanged. The mean of the banks' responses is calculated using weights from 1 to 5 for the five possible response options. Figures may not exactly add up due to rounding. The number of banks responding (No of banks) refers to all participating banks which have business in or exposure to the respective lending category. Std. dev. denotes standard deviation.

Question 121Have any adjustments been made, or will any be made, to your bank's credit standards/margins for loans over the past/next twelve months, owing to the new regulatory or supervisory actions?^(*)

^{1) &}quot;NA" (not applicable) does not include banks which do not have any business in or exposure to the respective lending category.

^(*) Please consider regulatory or supervisory actions that have recently been approved/implemented or that are expected to be approved/implemented in the near future. Notes: The net percentage (NetP) is defined as the difference between the sum of the percentages of banks responding "--" (credit standards / margins have been tightened/will be tightened considerably) and "-" (credit standards / margins have been tightened/will be tightened somewhat), and the sum of the percentages of banks responding "+" (credit standards / margins have been eased/will be eased somewhat) and "++" (credit standards / margins have been eased/will be eased considerably). "o" means the requirements have basically not had/will not have any impact on credit standards / margins. The mean and standard deviation are calculated by attributing the values 1 to 5 to the first possible answer and consequently for the others.

Please indicate the impact of your bank's non-performing loan (NPL) ratio and other indicators of credit quality¹ on your lending policy. In addition, please indicate the contribution of each factor through which the NPL ratio and other indicators of credit quality have affected or will affect your bank's lending policy.

¹⁾ The NPL ratio is defined as the stock of gross non-performing loans on your bank's balance sheet as a percentage of the gross carrying amount of loans. Changes in credit standards and/or terms and conditions can be caused by changes in the NPL ratio or other indicators of credit quality or by changes in regulation or in the bank's assessment of the level of the NPL ratio or other indicators of credit quality include, for example, Stage 2 loans (performing loans with a significant of credit risk) and loans in early arrears (loans for which payment is overdue for more than 30 and up to 90 days).

2) "NA" (not applicable) does not include banks which do not have any business in or exposure to the respective lending category (as regards credit standards), have not granted any new loans in the respective lending category during the period specified (as regards credit terms and conditions), or do not have any non-performing loans.

³⁾ This may include costs due to the need for additional provisions and/or write-offs exceeding the previous stock of provisions.

⁴⁾ This may include expectations of or uncertainty about future supervisory or regulatory requirements.

⁵⁾ Banks' perception of risk regarding the general economic situation and outlook, borrowers' creditworthiness and of the risk related to collateral demanded.

Notes: "--" = has contributed considerably/will contribute considerably to tightening; "-" = has contributed somewhat/will contribute somewhat to tightening; "o" = has not had/will not have an impact; "+" = has contributed somewhat/will contribute somewhat to easing.

The mean of the banks' responses is calculated using weights from 1 to 5 for the five possible response options. Figures may not exactly add up due to rounding. The number of banks responding (No of banks) refers to all participating banks which have business in or exposure to the respective lending category. Std. dev. denotes standard

Question 139

Over the past six months, how have your bank's credit standards, terms and conditions on new loans, and demand for loans changed across main sectors of economic activities¹? And what do you expect for the next six months?

¹⁾ The sectors of economic activities are based on the statistical classification of economic activities in the European Community (NACE Rev. 2): Manufacturing = C, Construction (excluding real estate) = F - F.41, Wholesale and retail trade = G, Services (excluding financial services and real estate) = M, N, H, I, J, Real estate = L + F.41. "Energy-intensive manufacturing" defined as basic chemicals, food, metals (iron and steel; non-ferrous metals, e.g. aluminium), non-metallic minerals (especially cement), paper and pulp, and refineries (refined petroleum and coke products). According to Eurostat, NACE relates to the characteristics of the activity itself. In this respect, please allocate the loans to the activity of the ultimate recipient of the funds. Units engaged in the same kind of economic activity are classified in the same category of NACE, irrespective of whether they are (part of) incorporated enterprises, individual proprietors or government, whether or not the parent enterprise is a foreign entity and whether or not the unit consists of more than one establishment. Source: Eurostat, NACE Rev. 2, Statistical classification of economic activities in the European Community, 2008.

^{2) &}quot;NA" (not applicable) does not include banks which do not have any business in or exposure to the respective lending category.

³⁾ This includes real estate construction (F.41) and real estate services (L). Commercial real estate is property used for business purposes (e.g. office, retail, industrial, multifamily (of five units or more), hotel, and special purpose buildings), while residential real estate is property used for living purposes, typically single family or individuals homes and one to four unit rental residences.

Notes: The net percentage (NetP) is defined as the difference between the sum of the percentages of banks responding "-" (tightened or decreased considerably) and "-" (tightened or decreased somewhat), and the sum of the percentages of banks responding "+" (eased or increased somewhat) and "++" (eased or increased considerably). "o" means "remained basically unchanged". The mean of the banks' responses is calculated using weights from 1 to 5 for the five possible response options. Std. dev. denotes standard deviation. The number of banks responding (No of banks) refers to all participating banks which have business in or exposure to the respective lending category.

Over the past six months, has the change in banks' excess liquidity¹ held with the Eurosystem led to a change in your bank's lending conditions and loan volumes? And what will be the impact over the next six months?

	Over the past six months												Over the next six months										
		_	o	+	++	NA ²	NetP	Mean	Std. dev.	No of banks		1	0	+	++	NA ²	NetP	Mean	Std. dev.	No of banks			
A) Impact of the change in banks' excess liquidity held with the Eurosystem																							
On your bank's credit standards	0	2	94	0	0	4	2	3	0	157	0	6	89	2	0	4	4	3	0	157			
On your bank's terms and conditions	0	5	91	0	0	4	5	3	0	157	0	5	89	2	0	4	4	3	0	157			
On your bank's lending volumes	0	5	91	0	0	4	-5	3	0	157	0	6	87	3	0	4	-4	3	0	157

Short-term loans ³	0	5	91	0	0	4	-4	3	0	157	0	6	87	3	0	4	-4	3	0	157			
Long-term loans ³	0	5	91	0	0	4	-5	3	0	157	0	6	87	3	0	4	-4	3	0	157			

⁽¹⁾ Excess liquidity of banks with the Eurosystem are the reserves that banks hold in the ECB's current account or deposit facility. They do not include the minimum reserve requirement. Changes in banks' excess liquidity can occur owing to changes in banks' liquidity holdings within the ECB's current account or deposit facility and due to a change in minimum reserve requirements.

(2) Please select "N/A" (not applicable) only if you do not have any business in or exposure to the respective category.

(3) Short-term loans are loans with an original maturity of one year or less, and long-term loans are loans that have an original maturity of more than one year, including on- and off-balance sheet credit lines.
